LUTIFY.ME

INSTALLING LUTs

Installing Lutify.me LUTs into Adobe Photoshop Lightroom is a simple matter of copying the appropriate ICC profiles from your package into a location on your hard drive.

Mac OS Instructions

Step 1
Close Lightroom if open.

Step 2
Please copy the ICC profiles **only** (without their enclosing folders) from your package into the following path on your hard drive:

Users > [Your Username] > Library > ColorSync > Profiles

Step 3
Launch Lightroom

For detailed instructions, please see this document.

Windows OS Instructions

Step 1
Close Lightroom if open.

Step 2
Please copy the ICC profiles **only** (without their enclosing folders) from your package into the following path on your hard drive:

C:\ Windows \ System32 \ spool \ drivers \ color

Step 3
Launch Lightroom

For detailed instructions, please see this document.

APPLYING LUTs

Once installed, Lutify.me LUTs will appear under 'Soft Proofing' option in the 'Develop' tab.

Select the appropriate LUT by selecting it from the drop down list under 'Profile' option in the 'Develop' tab.

If the list of LUTs is not populated with the LUTs you have just copied, select 'Other…' option and add a checkmark next to each and every LUT you would like to add into Lightroom.

Confirm your changes. Your LUTs will now appear in drop-down list and will be available for selection.

For detailed instructions, please see this document.
